

2002 Michigan Traffic Crash FACT SHEET

In a crash, motorcyclists lack the protection of an enclosed vehicle.

The 2002 death rate for motorcyclists was 13.8 per 100 million vehicle miles traveled compared to the overall mileage death rate of 1.3 per 100 million vehicle miles traveled.

Injuries to motorcyclists were proportionately more severe than injuries to persons in other motor vehicles.

There were 3,030 motorcycle-involved crashes in which 82 motorcyclists were killed and 2,470 injured.

Motorcycles were involved in 0.77 percent of all traffic crashes in Michigan in 2002.

Because motorcycles have a low profile, they tend to be less visible than other motor vehicles. 70 (85.4%) of the 82 motorcyclists killed were reported by police as "going straight ahead" just prior to crash.

Of the motorcyclists killed in traffic crashes in 2002, 90.2 percent were male.

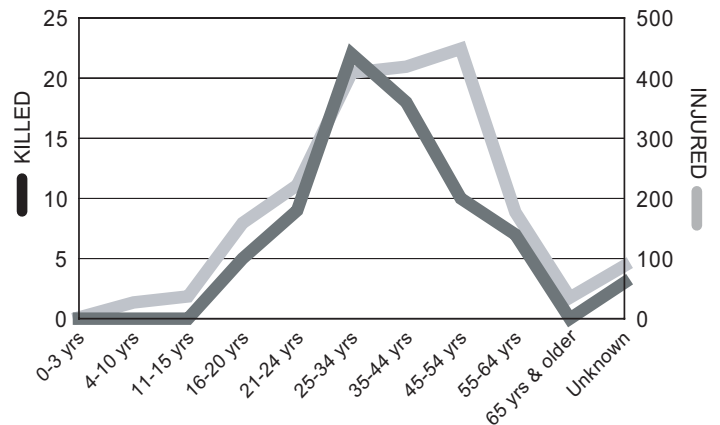

Of the motorcyclists killed in 2002, 24 deaths were the result of a had-been-drinking crash and 22 (91.7%) of these motorcyclists had been drinking.

Of the male motorcyclists injured, 409 (20.2%) were 25 - 34 years old.

AGE OF MALE MOTORCYCLISTS KILLED & INJURED IN MOTOR VEHICLE CRASHES

Of the motorcyclists killed in traffic crashes in 2002, 70 (85.4%) were reported by police as "going straight ahead" just prior to crash.

Of the motorcyclists killed in 2002, 24 deaths were the result of a had-been-drinking crash and 22 (91.7%) of these motorcyclists had been drinking.

Of the male motorcyclists injured, 409 (20.2%) were 25 - 34 years old.
