

The Big Picture Traffic Crashes

The driver, the roadway, and the motor vehicle contribute in some measure to every crash. A preponderance of evidence, however, points to driver error as a chief cause in the majority of crashes.

There were 315,322 reported crashes, of which 1,002 were fatal, 60,176 were personal injury, and 254,144 were property damage only. Compared to 2005 this is a 10.1 percent decrease in total reported crashes, a 2.7 percent decrease in fatal crashes, a 9.8 percent decrease in personal injury crashes, and a 10.2 percent decrease in property damage crashes.

1,084 persons were killed as a result of the 1,002 fatal crashes for an average of 1.1 deaths per fatal crash.

One out of every 9,313 persons in Michigan was killed in a traffic crash; one out of every 123 persons was injured.

A traffic crash was reported every 1 minute 40 seconds.

One person was killed every 8 hours and 5 minutes as a result of a traffic crash.

One person was injured every 6 minutes and 25 seconds in a traffic crash.

For each person killed, 75.6 persons were injured in crashes.

7,618 persons received A-injuries. An A-injury is incapacitating. It prevents normal activities and generally requires hospitalization.

The estimated economic loss due to traffic crashes was \$8.7 billion. If costs were spread across the state's population this would translate into a loss of \$865 per state resident.
